Nematological Abstracts

A quarterly journal covering all aspects of plant parasitic nematodes, free-living and marine nematodes, nematodes parasitic on insects or other invertebrates, and nematicides. It started publication in 1932 and contains approximately 2000 abstracts each year derived from the CAB ABSTRACTS database.

The CAB ABSTRACTS database is compiled from the world's scientific and technical literature. Over 40,000 published documents, including research papers, conference proceedings and papers, books, reports, patents and theses are received annually from more than 130 countries in 50 languages. This material is screened, translated, abstracted and indexed by professional and support staff, including 90 subject specialists and linguists. More than 150,000 new records are added to the database each year, the majority containing informative abstracts. Over 3 million abstracts from the world literature have been added to the computerized database since 1973, and this is complemented by a similar number in printed form before 1973, from CABI's origins in 1913.

EDITORIAL POLICY

This abstract journal is produced by the Editorial Departments of the CAB International Information Division, whose central function is the compilation of the CAB ABSTRACTS and CAB HEALTH bibliographic databases from the world's scientific and technical literature.

The Information Division has two other arms: Programme Development and the Development Projects Unit, and aims to achieve growth of its programme through new projects, often in collaboration with other organizations and backed by external funding, for the benefit of the international community.

This journal is derived from the CAB ABSTRACTS database, which covers the significant research and development literature in the fields of agriculture, horticulture, forestry, aspects of human health, human nutrition, animal and veterinary science and the management and conservation of natural resources.

The CAB ABSTRACTS editorial policy is to:

- scan all relevant literature
- record comprehensively the most relevant and scientifically significant material
- record all bibliographic details accurately
- prepare informative abstracts for all items reporting new findings or reviewing original research
- write abstracts in clear, concise and unambiguous English with consistent usage of terms and abbreviations
- index all important concepts within each record with the most appropriate terms selected from the CAB Thesaurus, CABI's controlled vocabulary.

This policy relies on the expertise of CABI's 90 professional subject specialists and linguists who translate and summarise the international scientific literature.
